PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building low-latency, high-availability backend systems for trading and financial applications. Specialized in Java, Spring Boot, Kafka, and distributed event-driven architectures, with hands-on experience in system design (HLD/LLD), performance optimization, and production-grade microservices. Recently expanded into Core Banking and Digital Wallet platforms, contributing to payment processing and financial transaction workflows.

WORK EXPERIENCE

Barq Technology Lab

Bengaluru, India

Software Development Engineer - I

Apr 2026 – Jul 2026

- Developing scalable backend microservices for a digital wallet platform using Java, Spring Boot, and Kafka.
- Contributing to Core Banking payment workflows including Cash-In, Cash-Out, Refunds, Rollbacks, and Peer-to-Peer (P2P) transactions, ensuring transactional consistency and reliability.
- Working across Payments, Wallet, Accounting, and Settlement microservices to deliver new features.
- Developed Backend APIs and integrated Retool applications for Finance and Operations teams, supporting accounting, refunds, rollbacks, and transaction monitoring.

Zentropy Technologies

Chennai, India

Senior Member Technical

Apr 2025 – Feb 2026

- Building a low-latency, highly available trading Order Management System (OMS) for NSE/BSE using a microservices architecture.
- Mentoring junior engineers and interns while implementing algorithmic trading workflows and end-to-end order lifecycle management with concurrency control and graph-based workflow storage using Neo4j.
- Driving system design (HLD/LLD) and leading code reviews for critical, high-performance microservices.
- Implementing and enhancing proprietary order types while ensuring production safety and compliance.
- Reduced API latency by ~35–50% using Redis-based caching and response compression techniques.

Member Technical

May 2023 – Mar 2025

- Designed and developed a paper trading broker platform using Spring Boot and Java/Kotlin.
- Built and maintained microservices and backend APIs for trading, order simulation, and market data processing.
- Worked with AWS and DigitalOcean infrastructure, integrating storage, compute, and serverless components.
- Automated tick-level market data ingestion handling ~600 ticks/sec with retries and backpressure handling.

Software Engineering Intern

Nov 2022 – Apr 2023

- Supported backend development for trading-related services using Spring Boot and REST APIs.
- Assisted in implementing microservice components and internal tools under guidance of senior engineers.
- Gained hands-on exposure to production systems, debugging, and deployment in Linux environments.

Sona College of Technology

Salem, India

Research Intern (Part-time | Academic Research)

Dec 2020 – Apr 2023

- Developed an Augmented Reality Sandbox using Azure Kinect DK and Python, simulating real-time visualization.
- Integrated sensor data processing using open-source libraries (pyKinectAzure) for depth and motion tracking.
- Conducted research and experimentation focused on computer vision and real-time data processing.

EDUCATION

Sona College of Technology

Salem, India

Bachelor of Technology in Information Technology

July 2019 – May 2023

CGPA: 9.48 / 10.0

TECHNICAL SKILLS & INTERESTS

Programming Languages: Java, Kotlin, Python, C, C++

Distributed Systems & Messaging: Apache Kafka, Kafka Streams, RabbitMQ, Event-Driven Architecture

System Design & Architecture: High-Level Design (HLD), Low-Level Design (LLD), Low-Latency Systems, High Availability

Build & Tooling: Gradle, Maven, Protobuf, Flyway

Backend & Frameworks: Spring Boot (Web, WebFlux, Security, Data JPA, Data Redis), Spring AI, REST APIs, gRPC, Microservices

Datastores & Caching: Neo4j, PostgreSQL, Redis, RocksDB, Vector Datastores (pgvector)

Data Processing & Analytics: Pandas, Dask, Kotlin DataFrame, Apache Arrow

Cloud & Infrastructure: Docker, Kubernetes, Linux, AWS (EC2, S3, Lambda, EBS, ECR), DigitalOcean

Testing & Quality: JUnit, Mockito, MockK

Security & Reliability: Vulnerability Assessment, Dependency Risk Analysis, Secure System Design

AI & LLM Tools: Retrieval-Augmented Generation (RAG), LLM Integration, Prompt Engineering, ChatGPT Codex, Claude Code
